

## Instructions for USED OIL FUEL TANK WARNING LABEL

Applies to: Used Oil Models RA,  
RAD, RAB, and RV

### ◀◀ **IMPORTANT** ▶▶

#### Instructions for Attaching Used-Oil Storage Tank Warning Label, P/N 121603

(Label is in the Owner's Literature Envelope for installation by the installer.)

To prevent unwanted and potentially dangerous liquids from being added to the used-oil storage tank, a warning label is provided with this new Model RA, RAD, or RV used-oil fired unit heater or Model RAB used-oil fired boiler.

The label **MUST** be affixed by the installer to the used-oil storage tank in accordance with the following instructions:

**1) Select a location for the Warning Label - *The warning label must be readily visible to the person filling the tank.*** (Do not select a horizontal surface where spilled oil may accumulate.)

**If fuel is poured directly into the tank,** select a label location as close as possible to the fill opening. (NOTE: If installing a Reznor Model OT-250 storage tank, the tank should be factory-equipped with this warning label. The enclosed label may also be affixed to the tank or may be discarded.)

**If an auxiliary transfer pump or piping is used to convey oil to the tank from another area,** select a label location at the point where the fuel is ***first introduced*** to the system.

**2) Affix the Label** - At the selected location, clean and dry the surface, being sure it is free of any oil residue. Remove the backing and adhere the warning label.

**3) IMPORTANT** - Make sure that the owner and all persons responsible for adding fuel to the tank are aware of the warning.
