## Waste oil heaters

Thomas & Betts - HVAC Division (REZNOR) announces the addition of Models RA-250 and RAD-250 waste oil heaters to their line of products specifically designed for recycling used oils into free heat.

The Model RA is a standard unit space heater while the Model RAD is a ductable furnace, designed for ducting heat to wherever it is needed. Both models are rated for 250,000 BTU input.

The new chamber design is efficient and accessible, offering extended run time between clean-outs. The RA-250 & RAD-250 models can be ceiling suspended or supported above a fuel tank.
